## Standing Seam Snow Guard

**HOLDS 1308 LBS**  
Mechanical Attachment

3" Wide Face

3" Tall

3" Wide Base

The newest standing seam system made of tough high-izod polycarbonate plastic. The guard has a 3" wide face, 3" tall face, 3" long base, and a 3" wide base. The Guard will fit up to a 1 1/4" wide seam. This plastic snow guard is compatible with all metals and composites. It features non-rusting stainless-steel fasteners which do not penetrate the roof, so there are no opportunities for leaks. The standing seam snow guard is designed to be used with ice bars. The bottom ice bar sits a mere 3/8" above the roof to keep ice from sliding. The second optional ice bar sits approximately 1 1/2" from the panel. The ice bar is 1" in diameter and is pre-cut cut to fit your panel. These guards can be installed in any weather.
