Non-Thermal Break Frame Aluminum Windows

Non-Thermal break frame aluminum windows are designed for metal building applications and have a commercial rating of C25 (HS), and heavy commercial of HC40 (fixed). These windows do not have a thermal break in the frame so are best used in the manufacturing or distribution area of the building or in Southern geographic areas. Windows can be installed directly onto the wall panel with fins to match, or be installed in a framed opening. Features:

- Self flashing / self framing window
- 5/8" Insulated clear glass—5 year warranty against seal failure
- 6063-T5 extruded aluminum frame
- Baked-on enamel finish—white, bronze or mill
- Various fins for metal wall panel installation
- Straight fin for framed opening installation
- Exterior trim fins included with all windows

**Straight Fin
for framed opening**
